

Предмет

Министерство науки и высшего образования Российской Федерации Федеральное государственное бюджетное образовательное учреждение высшего образования

«Московский государственный технический университет имени Н.Э. Баумана

(национальный исследовательский университет)» (МГТУ им. Н.Э. Баумана)

ФАКУЛЬТЕТ ИНФОРМАТИКА И СИСТЕМЫ УПРАВЛЕНИЯ

КАФЕДРА КОМПЬЮТЕРНЫЕ СИСТЕМЫ И СЕТИ (ИУ6)

НАПРАВЛЕНИЕ ПОДГОТОВКИ 09.03.01 Информатика и вычислительная техника

ОТЧЕТ ПО ЗАЧЕТНОЙ РАБОТЕ

Языки интернет программирования

Студент группы ИУ6-31Б	22 12 2022	
	23.12.2023	Семенов А.А. (И.О. Фамилия)
Преподаватель	23.12.2023	Маняшев Э.Р.
•		(И.О. Фамилия)

Проблема

- 1. В наше время трудно контролировать свои финансы, которые у большинства людей находятся на разных счетах в разных банках.
- 2. По статистике финансовая подушка безопасности есть у каждого третьего Россиянина, но большинство просто хранит деньги, не преумножая их. Многим людям трудно следить за своими расходами.

Цель

Разработать удобное веб-приложение для контроля финансов.

Задачи (Ход работы)

- 1. Спроектировать схему базы данных;
- 2. Разработать интерфейс веб-приложения с использованием шаблонов Bootstrap;
- 3. Разработать функции для построения графиков на основе переданных данных;
- 4. Разработать функции для экспорта в xlsx и csv на основе переданных данных;
- 5. С помощью микрофреймворка Flask привязать html-шаблоны к вебстраницам, наладить взаимодействие с базой данных SQLite, организовать вывод данных на веб-страницы и получение с них других данных от пользователя.

Решение

Код приложения представлен в «Приложении 1», а ниже идут скрины страниц.

Рисунок 1 – Главная страница

Рисунок 2 – Вход

Рисунок 3 – Регистрация

Рисунок 4 – Просмотр счетов

Рисунок 5 – Просмотр категорий доходов и расходов

Рисунок 6 – Экспорт данных

Рисунок 7 – Построение графиков

Процентное соотношение доходов по категориям

Рисунок 8 – Пример построенного графика

Рисунок 9 – Добавление расхода/дохода

Рисунок 10 – Добавление счёта

Рисунок 11 – Добавление/изменение категории расходов/доходов

Тестирование

```
∣import unittest
      from app import app
     from app.logics.sql import *
7 ▶ dclass TestCase(unittest.TestCase):
          def setUp(self):
              app.test_client()
          def test_all(self):
              with app.app_context():
                  obj = register("smit2@gmail.com", "smit", "Mr. Smit") # регистрация и вход
                  assert obj[2] == "Mr. Smit"
                  res = add_bank_account("Карта", 5000) # добавление нового счёта
                  assert res == "Данные изменены"
                  id_ba = get_bank_accounts()[1].id_bank_account
                  id_c = get_categories().first().id_category
                  id_dc = get_deposit_categories().first().id_deposit_category
                  res = add_deposit(id_dc, id_ba, 1300, "01.01.2023", '') # добавление дохода
                  assert res == "Данные изменены"
                  res = add_purchase(id_c, id_ba, 2500, "01.01.2023", '') # добавление траты
                  assert res == "Данные изменены"
                  res = get_sum()
                  assert res == '3800 ₽' # проверка того, что текущее количество денег подсчитано верно
      if __name__ == '__main__':
          unittest.main()
```

Рисунок 12 – Код теста

```
Testing started at 15:53 ...

Launching unittests with arguments python -m unittest test.TestCase.test_all in D:\Finance\app

Process finished with exit code 0

Ran 1 test in 0.456s

OK
```
